Summary

AI-focused developer building intelligent automation systems using semantic search, RAG pipelines, and Large Language Models. Experienced in developing AI-powered platforms using FastAPI, vector databases, and cloud-ready backend architectures. Skilled in building scalable AI workflows, semantic retrieval systems, and production-oriented applications using modern AI and backend technologies.

Technical Skills

Programming Languages: Python, Java, HTML, CSS, JavaScript

Databases: MongoDB, SQLite, PostgreSQL

Core Concepts: Data Structures & Algorithms, OOP, REST APIs

AI & Backend: FastAPI, RAG Pipelines, Semantic Search, Vector Databases, Large Language Models

Tools: Git, GitHub, VS Code, Android Studio

Projects

RAG AI Assistant

Python, FastAPI, FAISS, Groq Llama 3.1

- Developed an AI-powered Retrieval-Augmented Generation (RAG) assistant capable of processing PDF documents and generating context-aware responses.
- Implemented semantic search using Sentence Transformers embeddings and FAISS vector database for efficient document retrieval.
- Integrated Groq Llama 3.1 API with FastAPI backend to enable real-time AI-generated responses and RESTful API communication.
- Built scalable AI workflows for document ingestion, chunking, embedding generation, and intelligent response synthesis.

RecruitAI – AI Interview & Hiring System

Python, FastAPI, React.js, MongoDB, spaCy

- Developed an AI-powered recruitment platform featuring resume screening, AI-driven interview workflows, and candidate management systems.
- Implemented resume parsing and skill-matching using spaCy NLP to compare candidate resumes with job requirements and generate AI-based match scores.
- Built an interactive AI interview module with voice-based question delivery, audio response recording, and real-time frontend-backend integration using React.js and FastAPI.
- Designed scalable REST APIs and database workflows to manage candidate profiles, interview sessions, and recruitment analytics.

JobNova – AI Career Intelligence Platform

Python, FastAPI, Next.js, PostgreSQL, FAISS, OpenAI

- Developed an AI-powered job matching platform that analyzes candidate resumes and recommends relevant jobs using semantic search and vector embeddings.
- Implemented resume parsing, skill extraction, and AI-driven candidate-job matching workflows to evaluate experience, projects, and technical skills beyond keyword-based filtering.
- Built scalable REST APIs using FastAPI and integrated vector search with FAISS to generate context-aware job recommendations and match scores.
- Optimized backend workflows for intelligent recommendation pipelines, semantic retrieval, and production-oriented AI integrations.

Experience

Freelance Python & AI Developer

2024 – Present

- Developed AI and backend projects for freelance clients using Python, FastAPI, and modern web technologies.
- Built custom client-based applications including RAG systems, automation tools, and AI-powered platforms.

Education

BS Information Technology

CGPA: 3.3/4.0

Certifications & Achievements

- Secured **2nd Position** in Application Development Project during the 5th Semester academic evaluations.
- Participated in **AWS Cloud & AI Sessions** focused on cloud computing, backend infrastructure, and AI technologies.
- Completed online certifications and practical training in **Artificial Intelligence, Machine Learning, and Backend Development**.
- Worked on multiple AI-focused projects involving **RAG pipelines, semantic search, FastAPI, vector databases, and Large Language Models**.
