

USAMA TAHIR KHAN

DevOps Engineer

usamatahirkhan456@gmail.com • 0316-7489874 • Rawalpindi, Pakistan

Summary

I am passionate about infrastructure, automation, and building scalable, secure systems. With hands-on experience in modern DevOps practices, I contribute to mission-critical infrastructure and deployment pipelines. I maintain and automate cloud environments like Azure and AWS, along with a growing familiarity with containerization and networking concepts. I thrive in dynamic, production-oriented environments

Experience

Self Projects & Lab Environment

DevOps Engineer

Personal projects and lab work focusing on DevOps methodologies and cloud environments

- Built and deployed sample applications using Azure Cloud and AWS Free Tier, including services like EC2, S3, and Azure App Services
- Worked with Linux-based systems (Ubuntu, CentOS) to practice shell scripting, gaining hands-on experience with Docker by creating and managing containerized applications
- Applied basic networking concepts such as DNS, HTTP/HTTPS, IP addressing, ports, and firewalls to troubleshoot virtual machines
- Set up and tested CI/CD pipelines using GitHub Actions to automate builds and deployments for small demo projects
- Practiced monitoring and logging using basic tools and explored CloudWatch (AWS) for observability

Internship 1:

Ministry of Planning Development and Special Initiative

Islamabad, Pakistan

Intern

08/2025 - 10/2025

Worked on Linux-based systems, performed basic network configuration and troubleshooting, and explored cloud computing fundamentals.

Internship 2:

Netkom Technologies Islamabad

Islamabad, Pakistan

Intern

10/2025 - 11/2025

It was site based job and I worked there as a Network engineer for fixed networks on different sites.

Education

PMAS Arid Agriculture University

Rawalpindi, Pakistan

BS in Computer Science

10/2021 - 07/2025

Certification

Huawei Cloud from Corvit Rawalpindi

Rawalpindi, Pakistan

Corvit Rawalpindi

Skills

CloudWatch • IAM • Linux • Azure • AWS • Huawei • Azure Cloud • EC2 • S3 • Ubuntu • CentOS • Shell Scripting • Docker • DNS • Virtual Machines • GitHub Actions • AWS Cloud • Load Balancing

Projects

Shelter Seek Application using GPS

An Android application designed to assist refugees in finding shelter and essential resources

- Developed an Android app for Refugees to find shelter and different resources

Tourism Hub

A website developed to facilitate tourist bookings and information

- Created a website for hotel reservation, ticket booking, and visiting various locations worldwide
- Designed a user-friendly interface for ease of access

Interests

Emerging Technologies in DevOps

Exploring emerging DevOps technologies and keeping up with modern practices

Cricket

Playing cricket, which enhances teamwork and strategic thinking
